Projected distribution of the O26 removals based on the adopted catch limits for 2016 relative to the target distribution from the current IPHC harvest policy. Figure produced following the IPHC Annual Meeting on 29 January, 2016.

Time-series of estimated coastwide harvest rates (bars) relative to the annual harvest rate targets (line) from the current harvest policy. Values are hindcast based on the current ensemble estimates of exploitable biomass. Dashes indicate the projections from the preceding year for the 2013-2015 adopted catch limits. Open bar indicates the projected 2016 harvest rate. Figure produced following the IPHC Annual Meeting on 29 January, 2016.

Final decision table of 2016 yield alternatives (rows) and risk metrics (columns). Values in the table represent the probability, in “times out of 100” of a particular risk. Table produced following the IPHC Annual Meeting on 29 January, 2016.
